

Bug list:

Early bugs:

- 1.The value of frequency is out of the range sometimes. --- Fixed
- 2.The On & off button is not functioning well. --- Fixed
- 3.The visualizer is unable to show anything when music is played.---Fixed
- 4.Some randomly unexpected errors run out when the program runs --- Fixed
- 5.The variable names(example: Selector ID 'PEs', etc.) is unmatched during the coding.
---Fixed
- 6.The initial value setting and bounds is too small. ---Fixed

Late bugs & problems:

- 1.Since Chrome extension is strict, the visualizer is not able to be opened and shown while Youtube video play. --- Fixed
2. The background size of visualizer is fixed. The dynamic images and lines of visualizers are not precisely fit in middle of user's screen. --- Not fixed (User can adjust the position by themselves.)
3. The size of visualizer is not automatically adjusted during a window enlargement The size will only fit the current window size so, if the user zooms in or zooms out, the window is not automatically changed. --- Not fixed (the current way to deal with this problem is that the user can reopen the extension after window resizing)
4. When the visualizer is opened and covers the current page, the current page is unable to click. --- Fixed (Now, User is able to pause the music or video without disabling the extension, but don't click wrong place!!)
